

Exchange program in Japan report
Ruai Kittikhun
Period: September 2, 2013~September 27, 2013
Place: Kobe university hospital

I attended 2 departments in Kobe university hospital. There are Plastic surgery and Hepato-biliary-pancreatic surgery. First of all, I would like to thank to the Kobe university's staff who find the place for us to stay while we were in Kobe. The accommodation is wonderful, comfortable, safe and convenience.

During my 4 weeks at Kobe university hospital, I have a really good time. I can feel very warm welcome from all of the staffs and professors and also the students here. The activities that all of the staffs and professors are already prepared for us are excellent and useful. Most of the activities make me feel impressed and really interesting. The most worry I think about before I came here is about the difference of our languages. But I found out no problem during my stay here about the languages because most of the Kobe university students can speak English well and that surprise me. I found Japan is one of my interesting countries to extend my study after I already graduated but there is going to be a one big barrier because of the language. The people in Japan in my opinion are very shy but once I have chance to be friends with them they are very kind to me and some of them are extremely funny. In this time, I have chance to attend in the Kobe university basketball club. I enjoyed playing basketball with them very much. And that chance make me have more friends and all of them are nice to me.

Thank you, for giving me this chance to come and stay for studying at Kobe university. I wish I could make some good for this program. I am looking forward to take good care of the Japanese exchange program students that will come to Thailand.
