<div align="center">11th International seminar on disaster
Collaboration of Different Generation in the Community</div>

1. Introduction

   I am reporting about the experience [11th International seminar on disaster: Collaboration of Different Generation in the Community] in Gadjha Mada University. First of all I would like to express my gratitude to all of the people who supported me.

2. Interaction program among students

   We had an interaction program with graduate school student of Gadjha Mada University. 29 students participated an interaction program. Most of the students live near the university. They are living away from their family and work as a teacher and raise their children at the same time. I was surprised that they have a great motivation. As well as raising their children, they study hard to achieve their dream. It is difficult to achieve a good balance between academic lives and raise their children in Japan. I think in the department of the nurse, a fulfilling career in Indonesia is better than Japan. But not only the system but also their motivation is high than Japan.

3. International seminar

   I participated the 11th international seminar in Gadjha Mada University. In the seminar I had a chance to present about my research. It was great experience for me.

   Indonesia is said [supermarket of Disaster]. There are flood, TUNAMI, earthquake and eruption. Indonesia is hit many type of Disaster every year. In this seminar, many topics about the Disaster had been researched especially Merapi eruption. It is focused on enhance of the disaster-preventing in the community. It is very important things. In recent year in Japan, there is problem of dilution of human relations between generations in the community. Sharing the experience with Indonesia, we could find the new way of the disaster-preventing in the community.

4. Conclusion

   I would like to say thank you that I could participate the international seminar. It was great experience for me. Hopefully this seminar continue to improve the disaster-preventing in cooperation with together.
