September 7 Visit Ban Rom Sai  
September 10~12 Observe student practice in a community nursing  
September 13 Study visit community rehabilitation facility  
September 16~20 Overview and study visit obstetric wards

## ICU • CCU Nursing

### The variety of ICU

- surgical ICU
- medical ICU
- pediatric ICU

### CCU

#### For the patient of

- acute coronary syndrome
- acute heart failure
- arrhythmias
- cardiogenic shock

## ICU • CCU Nursing

• There is many nurses for each patient and nurse always stay around the patients.

So, there is no nurse call button.

ICU → 1 nurse : 1.3 patient

CCU → 1 nurse : 1 patient

→ We think it is good environment for patient because they can stay safely and can feel less anxiety.

## Pediatric Nursing

• Children's family can meet their children all day, and they support nursing care.  
For example, they measure the volume of patient's urine and drinking water.

• patient's room is divided into 3 rooms  
by patient disease

→ We think it is good system because nurses can take care of patient efficiently.  
And the family member can share the experience each other.

## Family's support

In Japan, many hospital has the system that all of nursing care is given by nurse without family care.

→ It can be decreasing family's burden

But...

We think if patient's family support nursing care with nurse, they can be decrease patient's anxiety and fear.

And the family and nurse can feel that they cure illness together.

## Obstetric Nursing

- Antenatal Clinic
- Labor room
- Postpartum Unit
- Child health promotion unit

## Antenatal Clinic

The difference between Japan

- all pregnant woman can get the iron drug.
- mother handbook is given by hospital.  
→ In Japan, it is given by public office.
- There is a education room for pregnant woman and their family.  
It is emphasized the importance and benefit of breast feeding .

## Postpartum Nursing

- Basically , mother and baby stay same room and same bed.
- Every morning , all postpartum do excises with nursing student.
- Mother's class is held everyday.
- There is Lactation Clinic to promote breast feeding.

## Lactation Clinic

This Clinic is for mother who can't give their milk because of various problems.  
Every postpartum mother who feed mother's milk can use this clinic.

→ We think it is good system that nurse not only recommend breast feeding not also prepare their environment.

The important thing  
for international nurse is...

*To understand the background of this  
country  
National characteristics ,  
environment of live ,  
And culture.*

Thank you for listening
