

Association of liver fibrosis progression with non-liver-related mortality in MASLD

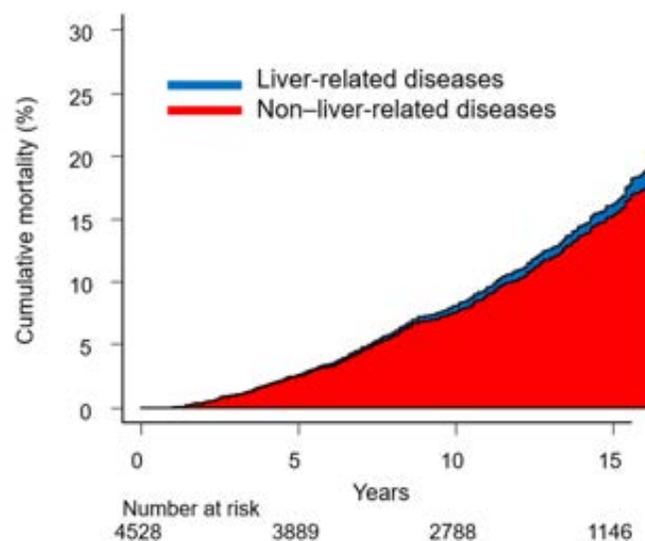

**4,528 pts
with
MASLD**

Fibrosis

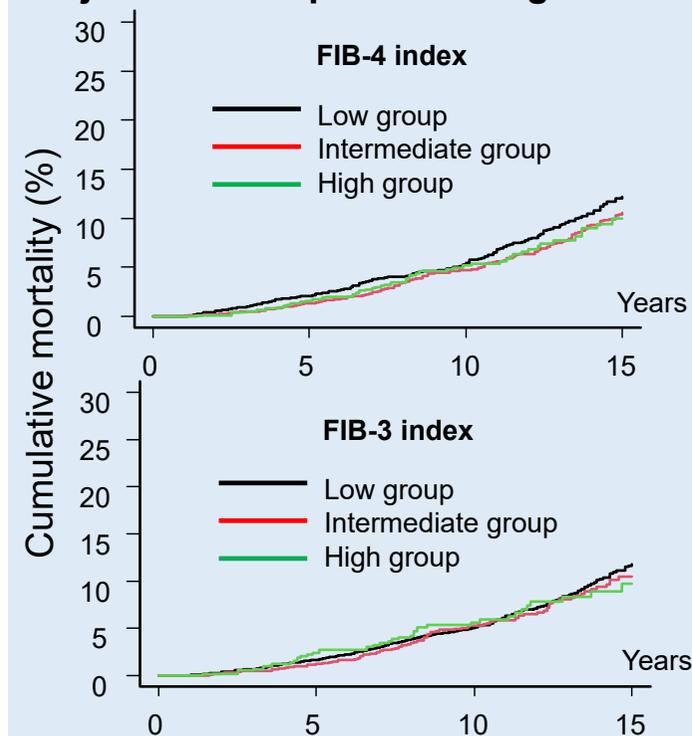

Fibrosis severity was assessed using the FIB-4 and FIB-3 indices.

Stacked cumulative mortality plot for competing events, specifically from liver-related or non-liver-related diseases

Cumulative non-liver-disease-related mortality rates based on the liver fibrosis indices with adjustment for patient background.

The progression of liver fibrosis was unassociated with mortality from non-liver-related causes in patients with MASLD.
