松田幹人先生からのメッセージ!

Since most of you chose medical school to become a clinical physician, I imagine that a physician-scientist is probably not a particularly popular career path. Furthermore, pathology, my specialty, has long been unpopular and may not be of interest to you. But I personally believe that clinical practice and progress of medical research are closely linked, and that research inspiration often comes from clinical cases. Therefore, in this lecture, I dare to deliver the passionate aspects of physician-scientists through their important role in bridging the gap between health care and medical research. I hope that after my lecture, even a small part of this, so-called “the spirit of physician-scientists”, striving to conduct research through clinical practice, will remain in the back of your mind and encourage you to consider physician-scientists in the future.
